Professional Summary

Self-taught software engineer and AI-native builder, Rust-first with a C, C++, and Assembly foundation. I build systems whose guarantees can be checked: Ed25519-signed, hash-chained exports with an independent verifier; on-device speech-to-text where audio never leaves the machine; Postgres row-level security for a nonprofit client. I ship end-to-end, solo and on small teams, with Claude Code. Inaugural cohort, Pursuit AI-Native Builder.

Experience

Pursuit Client Capstone (NYC Nonprofit) | Technical Director & Repo Admin Sep. – Nov. 2026
Gala guest list, private sponsor portal, and offline-first iPad check-in (React + TypeScript on Supabase); team of 4. *New York, NY*

- Led the Postgres backend: row-level security for 3 staff roles, an append-only change log, and sponsor links and QR e-tickets on 128-bit random tokens stored only as SHA-256 hashes; 791 access-rule checks
- Built the data integrations: a ticketing-platform import engine that keeps staff corrections across re-imports, and a Salesforce sync (Accounts, Opportunities, payments, Contacts, Campaign Members) tested against a stand-in org, with import files for partner review
- As repo admin, authored 180 of the team's 223 merged PRs and 70% of commits, wrote 13,000+ lines of tests, enforced branch protection and a secret scan on every change, and built a local CI fast lane after GitHub Actions minutes ran out
- Presented at Pursuit Demo Day and handed code and docs to the client, with four fact-checked study guides so anyone on the team can explain the build

Nisaba Capital Charting | Founder & Builder Apr. 2026 – Present
Native-Rust financial-intelligence desktop terminal merging market data with a Hellenistic astrology engine. *New York, NY*

- Built a ∼25k-line Rust app solo in 30 days: 12 data APIs, 10 native scrapers, 46 SQLx migrations, an axum sidecar, a sub-arcsecond ephemeris engine; 132 tests, zero warnings, Windows installer
- Reached +37.06% verified paper-trade ROI; presented at Pursuit Demo Day to staff, fellow Builders, and a Fortune 500 reviewer

Architechne | Data Analyst & Partnership Coordinator (1099) Sep. 2025 – Mar. 2026
Sourced luxury interior-designer, architect, and residential-developer leads for a NYC design partnership business. *New York, NY*

- Built a Python + AI web scraper over NYC tri-state directories and a MySQL territory database, cutting manual research ∼50%

Airbnb | Self-Employed Property Manager (Owner-Operator), Flushing, NY Jul. 2017 – Jan. 2020

Technical Projects

HouseCheck | Verifiable Building Records for NYC Renters 2026
Building Health Card scored from public NYC data, with an export a stranger can verify offline. Live; 176 tests.

- Built a Rust/axum service whose exports carry an append-only SHA-256 hash chain with an Ed25519-signed head and three verification outcomes (signed and intact, intact but unsigned, tampered), with source dataset IDs inside the signed region
- Wrote an independent Python verifier and found a forgery path: a rewritten chain re-signed with a forger's own key verified as intact. Closed it by publishing the signing key at a stable endpoint

Ziqpu | Multi-Agent Astrology Synastry Engine 2026
Scores a natal chart against the chart of anything with a date of origin (v1: stocks by IPO); reflection, not advice.

- Led a 3-person team on a Rust workspace: a measurer agent and an interpreter agent, a read-only axum sidecar, an MCP server, and a Dioxus UI

Resona / Wisper | Privacy-First On-Device Voice-to-Text 2026
Cross-platform desktop dictation app: live streaming + file/YouTube transcription, 100% on-device via whisper.cpp.

- Real-time pipeline (cpal → energy-VAD → incremental Whisper) with zero cloud STT and no accounts; CUDA/Vulkan/Metal/CPU backends from one Tauri 2 + Rust codebase
- Ed25519-signed licenses with client-vs-server entitlement gating; fixed SSRF and unsafe-export issues; shipped v0.2.0-beta.29 on Windows, macOS, Linux

Education

Pursuit | AI-Native Builder (Inaugural Cohort) May 2026 – Present
600+ hour, 7-month in-person intensive: 10+ end-to-end builds, 8+ PRDs; client capstone Demo Day Nov. 9, 2026. *Long Island City, NY*

Per Scholas | IT Support — CompTIA A+, Google IT Support, ServiceNow ITSM Grad. Oct. 2025
Vaughn College | Aircraft Mechanic Airframe & Powerplant (coursework complete) Flushing, NY

Skills & Tools

Languages & Frameworks: Rust (axum, SQLx, Tauri 2, Dioxus, Iced), Python, C, C++, Assembly, TypeScript/React, SQL (Postgres, MySQL)
Security & Integrity: Ed25519 signatures, SHA-256 hash chains, Postgres row-level security, hashed bearer tokens, gitleaks, SSRF hardening
Data Integration: Salesforce data model and REST API, SOQL, ETL/import pipelines, Postgres/Supabase
AI & Tooling: Claude Code, Cursor, Anthropic + OpenAI APIs, MCP, whisper.cpp, RAG, agentic workflows
Systems & Ops: Linux, Windows, GitHub admin (branch protection, CI), Supabase, Cloudflare Pages + Access, Fly.io, CUDA/Vulkan/Metal
